

Analysis of price trends of lithium batteries for energy storage cabinets

Overview

How big is the lithium-ion battery storage market?

The U.S. stationary lithium-ion battery storage market is estimated to surpass 173.5 billion USD by 2034. The U.S. market, on the other hand, exhibits a marked expansion in the adoption of lithium-ion battery storage.

What is a stationary lithium-ion battery storage industry?

Stationary lithium-ion battery storage industry has witnessed significant growth and demand in recent years. These batteries were first used in electric vehicles and then expanded to be used for both commercial and residential purposes.

Why did lithium-ion battery prices drop in 2024?

Overall, the price drop for lithium-ion battery cells in 2024 was greater compared with that seen in battery metal prices, indicating that margins for battery manufacturers were being squeezed. Therefore, suppliers are expected to push for price increases to mitigate losses with global demand for EVs and energy storage expected to grow in 2025.

Will lithium ion battery prices go down in 2025?

After tumbling to record low in 2024 on the back of lower metal costs and increased scale, lithium-ion battery prices are expected to enter a period of stabilization. The rapid decrease in lithium ion battery prices seen in previous years is likely to be slowed down in 2025 due to an uptick in battery material costs.

Why are battery prices so low in China?

Companies in China faced fierce competition this year. These conditions resulted in falling battery prices and lower battery margins, forcing many battery manufacturers to enter new markets, including energy storage, while also eyeing overseas markets willing to pay more for batteries. The industry

has also benefitted from low raw material prices.

How will EV battery demand affect the EV market?

This optimistic demand outlook is projected to stabilize battery material costs, with January prices for EV batteries expected to remain close to December levels, TrendForce says. Meanwhile, entering the traditional off-season for energy storage in the first quarter of 2025, many battery makers are likely to reduce production.
