

Australia s energy storage power source factory

Overview

How is energy stored in Australia?

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. To balance energy use across the Australian economy, heat and fuel (chemical energy) storage are also required.

What is EnergyAustralia's energy storage project?

The energy storage project will provide EnergyAustralia with a natural hedge against such market fluctuations and help stabilise energy prices and ensure a more resilient energy supply. "At EnergyAustralia, our purpose is to lead and accelerate the clean energy transformation for all," said EnergyAustralia Managing Director, Mark Collette.

Which energy storage technology is best for Australia's energy needs?

The CEC said emerging LDES technologies coupled with the energy storage systems in place, would be the best suite to appropriately manage Australia's needs. In March this year, the ARENA held an Insights Forum which covered energy storage and technologies that can bring system security to the grid.

Why is battery storage important in Australia?

Battery storage is now key to Australia's clean energy transition. It stabilizes supply by storing extra renewable energy and delivering it on demand, even when solar or wind output drops. This helps prevent blackouts and ensures steady green energy flow. BESS installations are expected to double by 2027.

What is the Wooreen energy storage system?

The utility-scale battery storage facility will add reliability to Victoria's energy supply while supporting the growth of renewable energy across the state. EnergyAustralia achieved financial close for the Wooreen Energy Storage

System on 20th February 2025. Construction will now commence on the four-hour, 350 MW Wooreen energy storage system.

How much will Queensland invest in a new energy storage factory?

In a joint statement this morning, Queensland's deputy premier and energy ministers said that the state will invest AU\$25 million (US\$17.12 million) in the factory, already under construction by Energy Storage Industries – Asia-Pacific (ESI), headquartered locally.
