

# Australia s first batch of wind power energy storage

#### **Overview**

How many wind and solar PV power plants were awarded in Australia?

In total, 6.3GW was awarded across wind and solar PV power plants. Image: EDL. The first Capacity Investment Scheme (CIS) tender round in Australia successfully awarded 3.5GWh of co-located battery energy storage systems (BESS) as renewables-plus-storage projects.

Why is wind power important to Australia?

Over the past five years, wind power has grown from a supportive renewable energy source to a foundational element of Australia's electricity grid. It now contributes significantly to the National Electricity Market (NEM), supplying clean, low-emission energy to millions of homes and businesses.

How big is wind energy in Australia?

Wind energy in Australia has experienced phenomenal growth, more than doubling in installed capacity over five years. By 2024, this figure rose to over 13.3 GW, with more than 100 wind farms operating across the country.

Is wind power a supplementary energy source in Australia?

Once seen as a supplementary energy source, wind power is now a cornerstone of Australia's energy transition. Over the past five years, the industry has grown at an unprecedented rate, reshaping the national energy land scape, bolstering regional economies, and positioning Australia as a global leader in wind technology.

Which energy storage technology is best for Australia's energy needs?

The CEC said emerging LDES technologies coupled with the energy storage systems in place, would be the best suite to appropriately manage Australia's needs. In March this year, the ARENA held an Insights Forum which covered energy storage and technologies that can bring system security to the grid.

What percentage of Australia's electricity is generated by wind?

Wind power's share in the national electricity mix has increased consistently year on year: In 2019–2020, wind contributed around 8.5% of total electricity generation. By 2023, that share had increased to 12.7%. In 2024, wind generation surpassed 13.4% of Australia's total electricity output, generating approximately 31.9 TWh.

#### Australia s first batch of wind power energy storage

# <u>Australia's shift towards long-duration energy storage ...</u>

Pumped hydro (pictured) has traditionally been one of the more popular forms of long-duration energy storage in Australia. Image: BE Power. ...
