

# Base station lead-acid battery voltage

### **Overview**

A fully charged 12V lead-acid battery should read around 12.6V to 12.8V when at rest, while a reading below 12.0V often indicates a discharged battery. For a 24V system, double these values, and for a 6V battery, halve them.

### Base station lead-acid battery voltage

### **BU-303: Confusion with Voltages**

Lead Acid The nominal voltage of lead acid is 2 volts per cell, however when measuring the open circuit voltage, the OCV of a charged and rested battery ...
