

# Brunei Communication Base Station Photovoltaic Power Generation

# **Overview**

Could solar energy be a potential energy option for Brunei?

Some preliminary studies in this direction indicated that solar energy could be a potential energy option for the country. Technical feasibility and economic viability of such grid integrated solar PV power plants, under the Bruneian environment, are investigated in this study.

How does Brunei generate electricity?

The power generation in Brunei primarily relies on natural gas-fired power plants, with increasing investments in renewable energy technologies. The nation's electrical grid must balance traditional fossil fuel-based generation with emerging sustainable energy sources.

Does Brunei have a solar power plant?

As a result, Brunei's second solar power plant, the 3.3 MW BSP Flagship Solar PV plant, was completed in 2021. This plant has almost 7,000 solar panels and can generate power for approximately 600 homes. The government has also taken steps to transition its own infrastructure to renewable energy sources.

Are grid integrated solar PV power plants viable under the Bruneian environment?

Technical feasibility and economic viability of such grid integrated solar PV power plants, under the Bruneian environment, are investigated in this study. The prevailing energy scenario is analyzed and future trends in electricity consumption are predicted based on the time series energy use data.

Could solar projects be a blueprint for Brunei?

The development of solar projects, akin to those by SolarBank, may serve as a blueprint for Brunei as it builds its renewable energy capacity. By leveraging community solar projects and exploring collaborations with international entities, Brunei can accelerate its renewable energy transition.

How can Brunei improve power transmission and distribution?

These include managing voltage fluctuations, preventing transmission losses, and integrating renewable energy sources into the existing infrastructure. The geographical diversity of Brunei's terrain adds complexity to power transmission and distribution networks.
