

# Comoros communication base station wind power damaged

# **Overview**

What is the energy situation in the Comoros?

The energy situation in the Comoros is substantially based on fossil fuel imports. This archipelago's socioeconomic development is heavily dependent on energy security from sustainability, availability, and affordability perspectives.

How many people in the Comoros have access to electricity?

Just less than 70 per cent of the population of the Comoros has access to electricity: 61.4 per cent in rural areas and 85.1 per cent in urban areas (Table 3 and Figure 4). There are also access disparities between the three islands.

What is the infrastructure like in Comoros?

Comoros has limited infrastructure for inter-island transportation. Only one official maritime operator is available for passenger and cargo services. This ship sails only once a week and can carry a maximum of 200 passengers.

Which plants use the most energy in the Comoros?

Key consumption and production statistics are shown in Figures 2 and 3. Biomass (wood and charcoal) is used to provide about 70 per cent of energy use in the Comoros. Other plants being explored for generating biomass energy include oilseed plants, such as coconut, sesame, peanut and Jatropha curcas (REEEP, 2012).

How much energy does Grande Comore use?

The total installed capacity is 22.6 MW and the efective capacity is 13 MW. The monthly consumption on Grande Comore only is 3,782.7 KWh. These high costs make the possibility of switching or incorporating more renewable into the energy mix very attractive (Houmadi & Chaheire, 2015).

Will Gafo power the Grand Comore volcanoes?

If successful, Gafo will operate the power installations. Recent analysis by engineers from KenGen, the Kenyan national utility, indicate that both the Karthala and La Grille volcanoes on Grand Comore have great geothermal potential, with reservoir temperatures taken at both sites of up to 300oC, at depths of 2,000 m and deeper (REEEP, 2012).

# Comoros communication base station wind power damaged

# Wind energy profiles of the Comoros.

Using all available wind speed, significant wave height, and wave period buoy observations over a 10-year period (i.e., 2009-2019), collocated wind and ...
