

Converting inverter to sine wave

Overview

In this post I have explained a few circuit concepts which can be employed for converting or modifying any ordinary square wave inverter to sophisticated sine wave inverter design.

As shown in the figure, a square wave and sine wave may have identical peak voltage levels but the RMS value or the root mean square value may not be identical.

This can be done either by carving a square wave sample into a sine wave form, or simply by chopping a sample square waveform into well calculated smaller.

In the above article I have explained how the waveform of a square wave inverter could be optimized for getting a sine wave kind of waveform by chopping the.

The real trick to this circuit is converting the sine wave to the appropriate bias voltage, which is handled by self-biasing the unbuffered inverter via the feedback resistor.
