

Cooperative Communication BESS Power Station

Overview

How much power does a Bess have?

The system is built of two main blocks. The PCS building block, responsible for the main control of the mobile BESS. The nominal power rating of the PCS block is 225 kVA, with a maximum peak power in the peak shaving mode of 275 kW . The second block is the modular battery pack.

How a Bess coordination scheme can be used for interoperable mobile System der?

Accommodating novel and state-of-the-art BESS coordination and protection capabilities. Furthermore, such a coordination scheme could be utilized to efectively connect multiple VMS and other mobile BESS in an efective manner, for an interoperable coordinated mobile system DER.

Do mobile Bess applications have communication interfaces?

This thesis project, carried out at Northvolt Systems, aims to analyze the existing and readily used communication interfaces for a specific set of mobile BESS applications. The analysis is performed by a literature review of typical mobile BESS applications with the identified corresponding communication interfaces.

Why should you choose a Bess energy storage system?

The mobility and flexibility of the system enables novel applications and deployments where BESS previously were unused due to the non-flexible solutions. The system is modular, meaning that the energy storage capacity can be quickly adapted depending on the application case, in contrast to larger and bulkier solutions.

Can EVs communicate with Bess?

As the standard is primarily intended for communications between CPOs and EVSE/charging stations, the device models presented in the standard does not

include modeling options for communication to non-EV related equipment, such as BESS.

What are the operational functions deemed interesting for mobile Bess operations?

A summary of the operational functions deemed interesting for mobile BESS operations are presented and explained below. DAGC: This operating function, Automatic Generation Control, is utilized by the balancing authority to control the DER active power output for managing the asset, mainly for frequency regulation.
