

Dedicated base station equipment for IoT communication

Overview

What is a base station in SimBase IoT?

In the context of SimBase IoT, a base station is a radio receiver which may have one or multiple antenna responsible for maintaining communication between the network and the users.

What is a telecommunication base station?

A base station is a transceiver that connects networking devices together and connects the devices to the internet in the context of telecommunications. Base stations can be company-specific, but competing telecommunication companies can have their individual base stations on a physical site.

What are the advantages of WAVIoT base stations & NB-Fi transceivers?

WAVIOT base stations and NB-Fi Transceivers with best-in-class receiver sensitivity enable the use of all advantages of the NB-Fi technology at the same time: long range of bidirectional data transmission, low power consumption and high scalability and stability of IoT networks.

What is a base station in a computer network?

In a computer network, a base station is a transceiver that connects devices together on a local area network and possibly connecting the devices to another local area network or the internet.

Dedicated base station equipment for IoT communication

? Base Station Specification

This IoT base station supports multiple communication modes to servers (3G, Ethernet etc.) for flexibility to adapt to various scenes; multi-network hot backup is also available to improve ...
