### **Overview**

Peak shaving, or load shedding, is a strategy for eliminating demand spikes by reducing electricity consumption through battery energy storage systems or other means. In this article, we explore what is peak shaving, how it works, its benefits, and intelligent battery energy storage systems.

The two charges that can significantly affect the rate at which industrial and commercial users pay for electricity include demand.

Peak shaving is the most effective way to manage utility costs for customers with demand charges, but it can also mitigate consumption.

Perhaps the most important consideration when looking at Battery Energy Storage Systems is the intelligent software that controls and.
