

# **Energy storage battery price** error

# **Overview**

How much does a battery storage system cost?

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

Are EV battery prices going down?

Now, as reported by CnEVPost, large EV battery buyers are acquiring cells at 0.4 RMB/Wh, representing a price decline of 50%to 56%. Leapmotor's CEO, Cao Li, expects further reductions, with prices potentially dropping to 0.32 RMB/Wh this summer, marking a decrease of 60% to 64% in a single year.

Are battery cell prices falling?

We are in the midst of a year-long acceleration in the decline of battery cell prices, a trend that is reminiscent of recent solar cell price reductions. Since last summer, lithium battery cell pricing has plummeted by approximately 50%, according to Contemporary Amperex Technology Co. Limited (CATL), the world's largest battery manufacturer.

Will a 60% tariff increase energy storage costs?

"What we found is that with the 60% tariff, the cost [of a turnkey energy storage system] increases by 60% compared to 2025, so this is quite a big cost jump if the US actually decided to do so," Kikuma says.

# Is battery overcapacity a problem?

Currently, overcapacity is a real concern. BNEF estimates the 3.1 terawatthours of fully commissioned global battery-cell manufacturing capacity is more than 2.5 times the annual demand for lithium-ion batteries in 2024.
