

## **Energy storage power station built in East Africa**

#### **Overview**

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) have emerged as a pivotal solution, storing excess solar energy generated during the day for use at night or during periods of high demand. Storage batteries can also be integrated with existing grid power to stabilise use between peak and off-peak usage.

What is the energy storage capacity of the Ingula PSS?

Straddling the border of South Africa's KwaZulu-Natal and Free State provinces, the Ingula PSS has an energy storage capacity of 21 GWh, or 15.8 electricity generating hours.

Why do we need energy storage solutions?

This discrepancy complicates the alignment of supply with demand, and periods of low sunlight hinder consistent access to power for households and businesses. Effective energy storage solutions bridge this gap between supply and demand.
