

Energy storage system battery cabinet combiner cabinet

Overview

Do you need a combiner box for a solar-plus-storage system?

While smaller solar-plus-storage systems, those with one or two battery cabinets and one inverter, do not typically require a combiner box, larger systems, particularly those with more than four cabinets and more than three inverters, need a combiner box to connect all of the devices together.

How do I choose a battery combiner box?

When deciding between using a commercially available battery combiner box or a 'do-it-yourself' box built from off-the-shelf parts, it is important to choose the solution that best suits each project. For many installers, the easiest option is to use an inverter-specific battery combiner box.

Do I need a combiner box?

For larger systems, with more than four cabinets and more than three inverters, a combiner box is required to connect all of the devices together. Understanding when to use a combiner box is only the first step, as the combiner box itself comes with its own set of questions.

Do I need a separate DC power distribution combiner?

In some cases, installers may choose to use a separate DC power distribution combiner for the battery banks, solar charge controllers, and inverters, such as Midnite Solar's MNBCB 1000. The MNBCB 1000 has an amp rating of 1000 and is an option for larger inverters with a 250 amp breaker.
