

Environmentally friendly solar system production in Slovenia

Overview

How many solar power plants are there in Slovenia?

The number of solar power plants in Slovenia has increased a lot in recent years and today their total power is approximately 368 MW and cumulative production of 2.6 % electricity. From Table 2 it is clear that main contribution on predicted RES are solar power plants.

What are the RES of primary energy in Slovenia?

RES of primary energy in Slovenia are water flows, wood, other biomass energy and solar radiation. Direct use of wood biomass is fairly limited to the use in boilers and to the direct combustion.

How much does solar energy cost in Slovenia?

In Slovenia, the average annual solar energy yield in Slovenia is around 1038 kWh/kWp. 2 The average cost of electricity for household consumers in Slovenia is approximately \$0.2247 per kWh, while the cost excluding taxes is around \$0.1819 per kWh. 3.

Are there geothermal power plants in Slovenia?

Currently there are no geothermal power plants (GPP) in Slovenia, but the potential does exist. The geological and tectonic environment of Slovenia is quite complicated, as it is divided into several tectonic units with different hydrogeological characteristics and geothermal conditions.

Is there a potential for res use in Slovenia?

The most sensible potential for an increase of RES use in Slovenia lies in solar (photovoltaics) and minor water potential. Water potential is already about 90 % exploited. Wind energy in Slovenia is too inconsistent for the commercial use. Its energy is very small on average while on the other hand, it is occasionally too strong.

How many res projects in Slovenia?

From 2016 Slovenian energy Agency has organized eight public invitations for tenders of RES which will be subsided by the state. From 1100 projects, 336 RES projects were selected with predicted installed capacity of 375 MW. Just 79 selected projects were so far realized with installed capacity of 45 MW.

Environmentally friendly solar system production in Slovenia

Towards an environmentally friendly power and hydrogen co

Abstract The sorption-enhanced gasification systems, which integrate the gasification process with an in-situ CO 2 capture system, have emerged as environmentally friendly solutions. This ...
