

Finland s unique solar power generation for home use

Overview

Solar energy in Finland is used primarily for water heating and by the use of to generate electricity. As a northern country, summer days are long and winter days are short. Above the , the sun does not rise some days in winter, and does not set some days in the summer. Due to the low sun angle, it is more common to place solar panels on the south side of buildi.

Markku Åberg, an entrepreneur in Mäntsälä, southern Finland, shows off what is likely the largest private-home solar power plant in the country. Sixty-four square metres worth of solar panels are arrayed on his rooftop and on a rocky hillside behind it.

Finland s unique solar power generation for home use

Finland solar electric power generation

The electricity sector in Finland relies on nuclear power,renewable energy,cogeneration and electricity import from neighboring countries. Finland has the highest per-capita electricity ...
