

## Genuine photovoltaic panels for power generation

#### **Overview**

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What is a solar PV power plant?

Solar PV power plants consist of several interconnected components, each playing a vital role in converting solar energy into usable electricity. Comprised of photovoltaic cells made of silicon, these panels capture sunlight and initiate the photovoltaic effect.

What is a photovoltaic plant?

A photovoltaic plant is made up of PV modules and an inverter. Photovoltaic panels are responsible for transforming solar radiation. In turn, the inverter converts direct current into alternating current with characteristics similar to the electrical grid. A solar array is a collection of multiple solar panels that generate electricity as a system.

What are photovoltaic cells?

Photovoltaic cells are the essential elements of a photovoltaic system. These are grouped in photovoltaic panels. Solar cells capture the Sun's radiation and convert it into electrical energy. In general, they are composed of silicon which is a semiconductor material that facilitates the photoelectric effect.

How are solar panels used in PV systems?

Solar panels used in PV systems are assemblies of solar cells, typically composed of silicon and commonly mounted in a rigid flat frame. Solar panels are wired together in series to form strings, and strings of solar panels are wired in parallel to form arrays.

#### What is 3rd generation photovoltaic technology?

Third Generation: This generation counts photovoltaic technologies that are based on more recent chemical compounds. In addition, technologies using nanocrystalline "films," quantum dots, dye-sensitized solar cells, solar cells based on organic polymers, etc., also belong to this generation.
