

Germany base station power supply bidding

Overview

Is Germany ready to switch to clean hydrogen?

FRANKFURT, March 5 (Reuters) - Germany's government has announced that it will tender for 10 gigawatts (GW) of new gas-fired power station capacity that must be ready to switch to clean hydrogen in the future transition away from polluting fossil fuels.

Will utilities bid for energy subsidies in Berlin?

Utilities have responded by saying they will bid for subsidies that Berlin has committed to pay because the plants will complement volatile renewables until such time that electricity can be 100% green.

Who owns Germany's coal-fired power stations?

German coal miner LEAG, which operates in the east of the country and is owned by Czech energy group EPH, plans gas-fired power stations at four locations with combined capacity of at least 3 GW. Western-focused mining and generation company RWE, Germany's biggest power producer, said it plans to take part in the tenders.

Is RWE taking part in Germany's energy tenders?

Western-focused mining and generation company RWE, Germany's biggest power producer, said it plans to take part in the tenders. The German arm of Norwegian power utility Statkraft said it would study the government's plan but would focus primarily on converting its existing gas-fired plants to hydrogen under ongoing internal company schemes.

Will Kraftwerke Mainz-Wiesbaden build a hydrogen-ready gas plant?

Rhine-Main area generator Kraftwerke Mainz-Wiesbaden said on March 4 that it wants to build a hydrogen-ready gas plant for 250 MW power and 100 MW district heat capacity at the site of an existing gas engine plant.

How can we reduce congestion in Germany in 2024?

Spread most pronounced in 2024 and declining somewhat towards 2030. The reduction in spread is a result of the assumed HVDC upgrades (in NEP) Internal grid developments in Germany are crucial for size of spread. Electrolyser investments or shifting RES from North to South could help to reduce congestions year 2030. Main insights:
