

Grid-connected inverter installation sequence

Overview

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller (MCU) family of devices to implement control of a grid connected inverter with output current control.

Can a grid connected inverter be left unattended?

Do not leave the design powered when unattended. Grid connected inverters (GCI) are commonly used in applications such as photovoltaic inverters to generate a regulated AC current to feed into the grid. The control design of this type of inverter may be challenging as several algorithms are required to run the inverter.

What should a user not do when using a grid connected inverter?

The user must not touch the board at any point during operation or immediately after operating, as high temperatures may be present. Do not leave the design powered when unattended. Grid connected inverters (GCI) are commonly used in applications such as photovoltaic inverters to generate a regulated AC current to feed into the grid.

How do I connect a solar inverter to a utility grid?

Step 1 Turn on the AC switch between the inverter and the utility grid. Step 2 Turn on the DC switch between the inverter and the PV modules. Step 3 Turn on the DC switch of the inverter. Inverter firmware version shown in this document is V1.00.00. Communication version: V1.00. The screenshots are for reference only.

How do I check if a ti inverter is grid connected?

TI recommends to use a controlled source at the output, such as an AC power supply to verify grid connected operation. Once the operation is verified,

check the functioning of the inverter with direct grid connection. Bias supply to the board is provided by an isolated 15-V supply connected to J2 and S1 in the ON position. Figure 32.

How do I stop a solar inverter from connecting to a grid?

Step 1 Issue a command to the inverter for halting the grid connection. Step 2 Turn off the AC switch between the inverter and the utility grid. Step 3 Turn off the DC switch of the inverter. Step 4 (Optional) Turn off the switch between the inverter and the PV modules. Make sure that the inverter is powered off.

Grid-connected inverter installation sequence

User manual Solar Grid-tied Inverter

The inverter can be connected to a RRCR (Radio Ripple Control Receiver) in order to dynamically limit the output power of all the inverters in the installation.
