

Guyana Power System Base Station Cost Price

Application scenarios of energy storage battery products

Overview

Electricity prices in Guyana are the third highest in the Caribbean due in large part to the country's reliance on expensive imported oil for electricity generation. At present the cost of fuel accounts for up to 60 percent of the total cost of electricity generation. Recent oil price hikes are passed on to consumers, as logically part of such increases in production inputs would be reflected in the price that consumers have to pay.

Why are electricity prices so high in Guyana?

Electricity prices in Guyana are the third highest in the Caribbean due in large part to the country's reliance on expensive imported oil for electricity generation. At present the cost of fuel accounts for up to 60 percent of the total cost of electricity generation.

What type of electricity is used in Guyana?

The electricity sector in Guyana is dominated by Guyana Power and Light (GPL), the state-owned vertically integrated utility. Although the country has a large potential for hydroelectric and bagasse -fueled power generation, most of its 226 MW of installed capacity correspond to thermoelectric diesel-engine driven generators.

What is the Guyana Power and Light Inc (GPL) discontinuing?

The Guyana Power and Light Inc. (GPL) with approval from the Public Utilities Commission (PUC), will be discontinuing the Fuel Rebate in our Valued Customers' bills. This Fuel Rebate of fifteen percent (15%) will be included in your Electricity Rate, so there will be no change to your monthly bills. View [press release](#).

How much power does Guyana have?

Installed power generation capacity in Guyana in 2007 was 226 MW or 0.4 kW per capita, which is lower than in other countries in the region and is hardly sufficient to cover the current demand for electricity in the country. Most electricity generation uses Diesel engines to drive generators.

How can Guyana generate electricity based on renewable resources?

Guyana has opportunities for electricity generation based on renewable resources linked to its large sugar industry. Electricity can be generated using bagasse, a by-product of sugar production, as basic fuel for thermoelectric facilities.

Does Guyana have a potential for hydropower?

Guyana has significant potential for hydropower, like its neighbor Suriname which has successfully developed hydro power programs. Renewable energy is viewed as a potential solution by the GoG to reduce the cost of power and provide reliable electricity.
