

High frequency inverter rectifier cabinet

Overview

What is a rectifier / inverter system cabinet?

Rectifier / inverter system cabinet of reduced height, populated with inverter modules, “EUE” electronic bypass switch and manual bypass, together with rectifier modules. You get the most economical solution and benefit in the long term from the direct link to BENNING as the manufacturer.

What are the advantages of a solid state hi frequency welder rectifying cabinet?

a. The solid state hi frequency welder rectifying cabinet integrate the switch gear cabinet part and rectifier part. b. Rectifier adopts all three-phase controlled rectification bridge, the pre-stage passive filter make sure the equipment has a bigger power factor but smaller harmonic content.

Can a rectifier cabinet be combined with ATESS PCs?

Modular rectifier cabinet, 300KW and 600KW optional, can be combined with ATESS PCS to form a DC coupling solution, suitable for large industrial scenarios.

Why should you choose Benning inverter systems?

With BENNING’s INVERTRONIC compact range of inverters, the company offers highly reliable, cost-effective, single-phase, modular inverter systems which provide high-quality, maximum-reliability electrical power to the critical loads.

What types of inverter modules are available?

The inverter modules are available for various input and output voltages, and the output power varies according to the voltage combination. INVERTRONIC compact inverter systems and their racks, comprising hot-swapping 1/5 19” rack modules with a range of 3 heights, are characterised by their modular architecture.

How do I switch the load to the inverter output?

There is the option of switching the load to the bypass mains or to the inverter output, thanks to the manual bypass which is also housed in a 1/5, 19" rack module. System cabinets are available in a range of different sizes, coming with the required number of racks for inverters and for rectifiers.
