

# How long is the lifespan of solar panels

## Overview

---

The industry standard for most solar panels' lifespans is 25 to 30 years. Most reputable manufacturers offer production warranties for 25 years or more. The average break even point for solar.

As the breakdown among solar panel Tiers shows, the quality of your panels makes a significant long-term difference to the output. For an indication of what type of output you can.

By working with an experienced installer to get your solar panels in place, you can feel confident that the racking will support the panels long-term. If.

Besides the savings potential and the environmentally friendly benefits, one of the biggest selling points of solar panels is that they are quite low-maintenance. If you want to extend your solar panels' lifespan, however, it can help to take care of them. For example, debris.

When it comes to solar panels, the lifespan and performance of your solar panels are significantly influenced by the climate where you install them. As such, you should be aware.

How long do solar panels last?

Racking systems for solar panels are also separate from solar panel warranties. These may incur damage from weather elements. Solar inverters generally last 10 to 15 years. This shortened lifespan is due to how hard inverters continually work to convert energy from the solar panels into usable electricity for your home.

Do solar panels still work after 25 years?

Studies such as those from the National Renewable Energy Laboratory (NREL) show that modern solar panels lose about 0.5% of their output per year on average. That means after 25 years, the panels are still working, just not quite as powerfully as when they were new.

How much power does a solar panel lose a year?

According to the NREL, the average solar panel loses about 0.5% of its generating power each year. Some panels, especially cheaper or poorly made ones, can degrade even faster—sometimes losing up to 1% per year. Over 20 years, that means you could see a 10% to 20% drop in how much electricity your system produces.

How long does a solar inverter last?

Most people focus on the panels, but the inverter—the device that turns solar electricity into usable power for your home—usually doesn't last as long. Standard string inverters typically last about 10 to 15 years, which means you'll probably need to replace them at least once during your panel system's lifetime.

How long do Tier 1 solar panels last?

Industry standards confirm that modern Tier-1 solar panels are built to last. While the common performance warranty guarantees strong energy output for 25 to 30 years, this is often just the beginning of a panel's life.

How long does a solar panel warranty last?

Most panel warranties are split into two parts: a performance guarantee, and a product or workmanship guarantee. The performance warranty promises your panels will still produce at a certain level after 25 years, but the product warranty is often much shorter—typically 10 to 12 years.
