.

How long can a lithium battery last?

Let's say you have a 200Ah battery bank. If it's a Lithium battery your usable capacity is around 180Ah. If it's a lead-acid battery, your usable battery capacity is around 100Ah. If your power usage was 73Ah, in this case you could spend 2.5 days (or 60 hours) away from charge, if you have a Lithium (LiFePO4) battery bank.

What are Ah ratings in lithium batteries?

Lithium batteries are rated in ampere-hours (Ah), which indicates their capacity to store energy over time. Understanding these ratings is crucial for optimizing battery performance and longevity, especially in applications requiring long-term energy storage.

How many Ah does a leisure battery use?

The total Ah used up is 73Ah. A common size of leisure battery is 100-120Ah, some people will buy two, thus creating a battery bank of size 200-240Ah. Many people with moderate power usage, and who are regularly but not spending every moment at a campsite with EHU choose this size of leisure battery bank. Let's say you have a 200Ah battery bank.
