

# How many volts and wattages does a 12v inverter have

#### **Overview**

How many Watts Does a 12 volt inverter use?

Here's a diagram with a 12-volt battery, an inverter and a 1,200-watt microwave oven. Note that on the 12-volt side of the inverter you need 1,200 watts going in, which works out to 100 amps x 12 volts = 1,200 watts. But on the 120-volt side of the inverter you get 1,200 watts coming out, which works out to 10 amps x 120 volts = 1,200 watts.

What is a power inverter?

A power inverter converts 12 volt DC power to standard household 110-120 volt AC power, which allows you to run AC electrical equipment off your car or marine battery for mobile applications, emergencies or simple convenience. Power inverters come in many sizes, measured in watts.

How many volts is a 12 volt battery?

A typical 12V automobile battery has 50-80 Amp Hours (Ah) capacity. For a 12 volt battery, 10.0 volts is considered a depleted battery and should be fully charged as soon as possible. For smaller inverters less than 200 watts, a normal automobile size battery is sufficient to power the inverter for short durations with the vehicle off.

How long will a 12 volt battery run an inverter?

However, you can determine how long will a 12 volt battery run an inverter depending on how many watts load and amp-hour the battery has. In general, a battery lasts about 10-17 hrs with a 12-volt battery inverter. Batteries work by creating current flow in a circuit through exchanging electrons in ionic chemical reactions.

How to choose a battery for a power inverter?

Deep cycle batteries are a better choice as a power source for an inverter. They are designed to be repeatedly drained and recharged. It is also a good

idea to have more than one battery supplying power to an inverter. The amp hour rating of a battery is the most important measure when choosing a battery for power inverter use.

How much power does an inverter need?

The continuous power requirement is actually 2250 but when sizing an inverter, you have to plan for the start up so the inverter can handle it. Third, you need to decide how long you want to run 2250 watts. Let's say you would like to power these items for an eight-hour period.
