

How much does energy storage vehicle products cost in Mauritius

Lithium Solar Generator: \$150

Overview

Why is battery energy storage system being introduced in Mauritius?

The CEB is introducing a Battery Energy Storage System (BESS) on its network to arrest the fluctuation inherent to Variable Renewable Energy (VRE) systems. This is due to the increasing share of VRE in Mauritius' energy mix, as the country's energy transition to a low carbon economy gains momentum.

Is Mauritius a good place to invest in battery electric vehicles?

Because of the size of the island, Mauritius fits well with the introduction of battery electric vehicles. The combination in the long run with production of renewable energy through solar charging during the day is theoretically the ideal situation.

How much electricity does a car use in Mauritius?

This is accounted for by taking a variance peak factor of 1.5 lxxxv; Total EV electricity demand is based on an annual mileage of 25,000 km (making the average car's daily driving distance on Mauritius 68 km) and the energy consumption of an average EV of 0.18 kWh/km.

Can EVs be charged in Mauritius?

This can be between the vehicle and the charger, but also between various mobility service (tank) cards, and interoperability between control systems regarding EV grid integration. Limited renewable energy in grid mix reduces the support for EVs. There are no rules, framework and standards for the charging of EV in Mauritius.

What is the EV load without smart charging in Mauritius?

The EV load without smart charging is based on the division of charging infrastructure per type, which for Mauritius are estimated by the values depicted in Table 10. It shows the ratio between the number of EVs and type of charging. For example, in the case of home charging: 100% indicates that

for every EV there is 1 home charger.

Is solar charging a good option in Mauritius?

The combination in the long run with production of renewable energy through solar charging during the day is theoretically the ideal situation. The current electricity mix on Mauritius consists of 20.9% of renewables, and is characterised by a relatively high emission factor of 0.897 kg CO₂/kWh (yearly average).
