

How thick is the solar panel

Overview

Solar panel depth, or thickness, is relatively consistent, generally ranging from 1.18 to 1.57 inches. Panels with a 1.38-inch (35 mm) depth are quite common. Some models, especially those designed for greater durability or specific applications, might have a slightly greater depth of 1.57 inches.

How thick is the solar panel

Thin-film solar panels: explained [UK, 2025]

Thin-film solar panels are lightweight and flexible, but are they suitable for households looking to cut their energy bills? We explore the pros ...
