

How to connect two battery cabinets together

Overview

How do you connect two batteries together?

Formula: 2 * (x - 1), where x is the number of batteries. Use a battery cable to connect the two batteries' positive terminals together. I recommend using a red battery cable for this connection. Use a second battery cable to connect the two batteries' negative terminals together. I recommend using a black battery cable for this connection.

Can two batteries be connected in parallel?

The parallel connection of two identical batteries allows to get twice the capacity of the individual batteries, keeping the same rated voltage. Following this example where there are two 12V 200Ah batteries connected in parallel, we will therefore have a voltage of 12V (Volts) and a total capacity of 400Ah (Ampere hour).

How do you wire a battery in series?

For more information on wiring in series see Connecting batteries in series, or our article on building battery banks. The basic concept is that when connecting in parallel, you add the amp hour ratings of the batteries together, but the voltage remains the same. For example:

How to connect a battery?

First of all, it is essential that all batteries involved are identical and have the same state of charge. Secondly, it is important to use short electrical cables, of the same length and with suitable cross-section for the connection of the batteries. Below you will find some very clear images in order to easily understand the battery connections.

Can a battery be connected in series?

When connecting batteries in series: Never cross the remaining open positive and negative terminals with each other, as this will short-circuit the batteries

and cause damage or injury. The other type of connection is parallel. Parallel connections will increase your capacity rating, but the voltage will stay the same.

How to connect 3 12V batteries in series?

If your battery allows it, you can repeat the above steps to connect more batteries in series. You can wire three 12V batteries in series to create a 36V battery bank. Once again, just connect the negative terminal of your 2-battery series string to the positive terminal of the third battery.
