

## **Inverter DC voltage matching**

#### **Overview**

Should you match a solar inverter with a battery?

A well-matched inverter and battery will help you make the most of your solar investment for years to come. Reach Out to SunSelect at 1300 867 353 for Expert Guidance and Money-Saving Options. In this in-depth guide, we break down everything you need to know about matching solar inverters with battery systems.

What is a string inverter?

A string inverter is connected with a string of solar panels, which is called the solar array. There are many ways of connecting a string of solar panels. A typical solar array can consist of around 15 solar panels of each 250Wp. Each solar panel is connected in series to the string inverters.

What is a DC-coupled solar inverter?

In an AC-coupled setup, the solar inverter and the battery inverter operate independently. The solar inverter converts solar DC to AC, and a separate battery inverter then converts AC back to DC for charging the battery. 2. DC-Coupled Systems.

What are the different types of solar inverters?

There are different types of solar inverters, each with unique characteristics and compatibility factors for battery storage: A string inverter is connected with a string of solar panels, which is called the solar array. There are many ways of connecting a string of solar panels.

How to choose a solar inverter?

1. Voltage Compatibility: Battery voltage must match the inverter specifications. 2. Communication Protocols: Inverter and battery need to "speak the same language". 3. Backup Power Needs: Not all inverters offer off-grid or backup capabilities. 4. Future Expansion: Choose scalable systems

if you plan to expand solar or storage.

Are all solar inverters compatible?

But not all inverters can manage both solar power generation and battery charging/discharging. If your current inverter isn't compatible, you might need to replace it or add additional components, which can increase the overall system cost and complexity. 1. AC-Coupled Systems
