

Inverter grid-connected new energy

Overview

Grid-connected inverters are power electronic devices that convert direct current (DC) power generated by renewable energy sources, such as solar panels or wind turbines, into alternating current (AC) power that can be fed into the electrical grid or used locally.

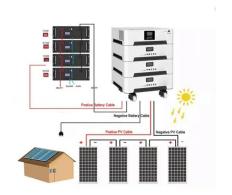

Inverter grid-connected new energy

Grid-tie inverter

A grid-tie inverter converts direct current (DC) into an alternating current (AC) suitable for injecting into an electrical power grid, at the same voltage and frequency of that power grid.
