

Is substation energy storage a good investment

Overview

Why is the substation market growing?

The substations market is growing, due to an increase in demand for electricity and the need to improve old infrastructure. As nations put money into renewable resources such as wind and solar energy, substations become essential for bridging these sporadic power sources into the grid.

Why are new substations becoming more popular?

Due to the ever-increasing demands for energy, many are expanding and enhancing their substation networks, and it is clear that the construction of new substations must keep pace with the constant needs of the population. The new worldwide focus on green energy is also contributing towards the substations market growth.

What are the benefits of a new substation?

A: A new substation means that you will be assured of continued power quality and reliability as your area continues to grow and the demand for electricity increases. Overloaded substations and power lines have a higher frequency of failure, and under peak conditions, power quality issues such as blinks and brown-outs can occur.

Why do we need modern substation data?

The maintenance of the grid shall benefit from modern substations data as the later forms an important source of failure data. For instance, the IEC 61850 object models provide datasets that contain status of equipment at many levels in the substation.

How much is the substation industry worth in 2022?

The substation industry was valued at USD 114 billion, USD 121.6 billion and USD 128.5 billion in 2022, 2023 and 2024 respectively. Government and companies, along with the mitigating operational costs, complying with

governmental regulations, and meeting climate goals are constantly trying to achieve crucial output in this market.

How big is the global substations market?

The global substations market was valued at USD 128.5 billion in 2024 and is estimated to reach the value of USD 178.9 billion by 2034, growing at a CAGR of 3.2% from 2025 to 2034. Emerging technologies are the best stimulus for the market expansion. The number of substations continues to increase as power production plants are built.
