

Italian Solar Ecosystem Design

Overview

Does photovoltaic electricity production in Italy have environmental performance?

Conclusions The environmental performances of the photovoltaic electricity production in Italy by current and future Italian PV scenario were assessed applying Life Cycle Assessment methodology.

What is a life cycle assessment of photovoltaic electricity production in Italy?

This study presents a Life Cycle Assessment (LCA) of photovoltaic (PV) electricity production in Italy based on the composition of the current and future Italian PV scenario. Using detailed and site-specific data, the actual composition of the Italian mix of PV technologies at the end of 2022 and those expected for 2030 were defined.

What is the EIB doing to boost Italy's renewable landscape?

The European Investment Bank (EIB) has facilitating a boost to Italy's renewable landscape through a €100m (US\$102.9m) green loan to Iberdrola for a new photovoltaic installation in Sicily.

Should solar technologies be integrated in heritage buildings?

The strategy for integrating solar technologies in heritage buildings neither should consist of compromising the cultural values of the architectural heritage nor should lead to hiding new elements, which are gradually becoming part of our landscape.

Are ground-mounted PV systems more sustainable than rooftop PV systems?

Energy yield and module efficiency were the main key factors affecting LCA results. Except for land use ground-mounted PV systems were more sustainable than rooftop ones. This study presents a Life Cycle Assessment (LCA) of photovoltaic (PV) electricity production in Italy based on the composition of the current and future Italian PV scenario.

What are the problems of integration of PV systems with architectural heritage?

The main problems of integration of PV systems with the architectural heritage are the impact on the image of the building, on the conservation of its elements and, therefore, on its identity. This impact consists of alterations in volumes and shapes, materials and surface characteristics (colour, texture, grain, etc.).
