

# Japan Energy Storage Photovoltaic Panel Project

# **Overview**

What is Japan doing with solar power?

Japan is making steady progress toward the practical implementation of both. The SBSP project involves the space launch of satellites equipped with giant solar panels measuring 2 km2, converting the generated electricity into microwaves that are then transmitted wirelessly to the ground.

Can Japan harness the potential of solar power?

Japan's efforts to harness the potential of solar power, a well-known renewable energy source, will shine a light on humanity's future. Japan is making steady progress toward the implementation of the groundbreaking technologies of both space-based solar power and flexible solar cells.

Does Japan have a solar power plant?

t new-build renewable power plants in Japan include an energy storage component. The two largest solar PV power plants in Hokkaido, commis oned in July and October 2020, respectively, both include lithium ion batteries. One plant has generating capacity of 64.6MWp and battery output of 19.0MWh.

Why is Japan a good place to build a solar power station?

Japan also has strong enough capabilities in satellite system design to maximize power generation efficiency and accurately transmit power to the ground. Professor SHINOHARA Naoki of Kyoto University's Research Institute for Sustainable Humanosphere specializes in wireless power transmission, space solar power stations, and microwave processing.

What is the cumulative capacity of PV+storage plants in Japan?

The current cumulative capacity of the top 6 operational PV+storage plants in Japan is 44.3 MW. Whereas the estimated cumulative capacity of the PV+storage pipeline is 120 MW. 15 largest Solar + Storage plants in Japan (Operational & Under Construction).

How many centralised PV+storage projects are there in Japan?

The overviews presented below showcase the 15 centralised PV+storage projects, operational or under construction (some soon to be operational) as per beginning of 2018. The current cumulative capacity of the top 6 operational PV+storage plants in Japan is 44.3 MW. Whereas the estimated cumulative capacity of the PV+storage pipeline is 120 MW.
