

Latest on Denmark s new energy storage policy

Overview

The Danish Alliance for Renewables (DAFRE) has released its Annual Agenda 2025, emphasizing the need for wind, solar, and battery technologies to take over the critical stabilizing functions traditionally provided by fossil-fueled power plants. What is Denmark's energy policy?

The energy policy in Denmark has for many years focused on lowering the net CO2 emission from heat and power production by replacing fossil fuels by renewable resources.

Will Denmark be able to cover its energy demand?

Going forward, further expansion of renewable energy capacity and sources is an important element in meeting the government's long- term vision to make Denmark able to cover its energy demand by renewable energy generation and sources. Analyses show that the costs of introducing renewable energy in Denmark have been relatively high initially.

Why did Denmark rethink its energy policy?

The 1973 oil crisis forced Denmark to rethink its energy policy; in 1978 coal contributed 18%, and the Tvind wind turbine was built, along with the creation of a wind turbine industry. The 1979 energy crisis pushed further change, and in 1984 the North Sea natural gas projects began.

How many permits does Denmark have for CO2 storage?

Denmark has six permits for exploration with the aim of CO₂ storage. Denmark has political agreements with several countries for cross-border transport of CO₂ for geological storage beneath the seabed. Implementation of the total CCS fund is contingent upon state aid approval from the European Commission.

When will the Danish Energy Agency publish the tender material?

The Danish Energy Agency expects to publish the tender material in October

2024 and award contracts in April 2026 following a prequalification and negotiation round. See the public consultation material on the Danish Energy Agency's website.

When does the Danish Energy Agency's CCS consultation start?

The Danish Energy Agency's consultation will run until August 20, 2024, giving an opportunity for everyone, including potential bidders, to provide feedback on the CCS Fund. The Danish Energy Agency expects to publish the tender material in October 2024 and award contracts in April 2026 following a prequalification and negotiation round.
