

Latvian monocrystalline photovoltaic modules solar panels

Overview

What is the largest solar panel Park in Latvia?

This summer, on the roof of SIA Lyngson's production building, the largest solar panel park in Latvia was completed. The project was successfully implemented in cooperation with the largest Latvian private energy group AJ Power and has a total capacity of 489 kW generated by 1580 FuturaSun photovoltaic panels.

What are monocrystalline solar panels?

Monocrystalline photovoltaic panels are advanced devices designed to convert sunlight into electrical energy through a process called the photovoltaic effect.

Are monocrystalline photovoltaic panels a good choice?

Monocrystalline photovoltaic panels are at the forefront of solar technology due to their efficiency, durability and ability to generate energy even in confined spaces. They are considered an excellent choice for anyone wishing to install a high quality photovoltaic system, whether for residential or industrial use.

How are monocrystalline photovoltaic cells made?

Monocrystalline photovoltaic cells are made from a single crystal of silicon using the Czochralski process. In this process, silicon is melted in a furnace at a very high temperature.

Why should you choose a monocrystalline solar module?

With no visible solder joints and optimal energy management, these monocrystalline modules guarantee high performance and long life, making them ideal for residential and industrial applications. If you want to invest in high quality solar energy, choose the most advanced monocrystalline technology.

How long do monocrystalline solar panels last?

Durability and reliability: Thanks to their robust construction, monocrystalline panels offer a lifespan that can exceed 25-30 years. In addition, their resistance to degradation means that they maintain a very good energy yield over time.
