

Mobile portable power box

Overview

What is a portable power station?

A truly portable power station will be light and small, but it won't be able to do as much as the huge ones. It all depends on what you need. The smaller power stations are usually great at charging phones, tablets, powering small appliances, etc.

Why should you buy a portable power station?

Bring big backup power with you with these expert-recommended portable power stations, which can store enough power to charge electronics, appliances, and more.

How much does a portable power station cost?

A typical price for a Portable Power Station is \$1,392 but can range from approximately \$59 to \$9,429. These Portable Power Stations are the most popular among Lowe's entire selection. While these are popular, we recommend ensuring that the Portable Power Stations you consider have the right mix of features and value.

How do portable power stations work?

Portable power stations have control panels with LED displays and buttons that turn off and on inputs and display usage and remaining power. Most portable power stations are also compatible with Bluetooth and Wi-Fi, allowing you to monitor and control them remotely from a smartphone app.

How to choose a portable power station for camping?

Setting one up inside a home or workshop means close quarters, and loud models could literally require hearing protection. A portable power station for camping should also be quiet, or else it may disturb the neighbors. Typically, electric and solar power stations make for the quietest generators available.

How long does a portable power station last?

A portable power station's lifespan depends on the type of battery inside. Most new portable power stations, including all the models we recommend here, feature LiFePO4 battery technology, which lasts far longer than older lithium-ion technology. How much more?

LiFePo4 power stations will last for more than 3,000 charge cycles, or about 10 years.
