

Monocrystalline 12v solar water pump inverter

Overview

How to choose a solar pump inverter?

Understand the rated power of the water pump. Normally, the rated power of the solar pump inverter should be slightly more than or equal to the rated power of the water pump to ensure that the pump can be operated normally. For instance, if the water pump's rated power is 2kW, the selected inverter should have a rated power of 2kW or higher.

What are MPPT solar pump inverters?

MPPT solar pump inverters change DC electricity from solar panels into AC, running different water pumps. They adjust to get the most power from your solar setup. These are also known as solar VFD for their feature of varying the frequency of the electricity. Solar water pumps work in many areas like irrigation and swimming pools.

Are solar pump inverters eco-friendly?

Solar pump inverters cut down on long-term costs compared to diesel. They lower greenhouse gases and environmental pollution. This makes them eco-friendly and cost-effective. A solar pump inverter converts DC from solar panels into AC to power water pumps, enabling efficient and clean solar water pumping systems.

What is a solar pump inverter?

The solar pump inverter is an off-grid inverter that doesn't rely on the grid and operates independently of the load. The traditional off-grid inverter requires a battery, which costs about 30% of the system's cost. The system has a life span of only 3-5 years, which can affect your ROI.

What is a variable frequency solar pump inverter?

The Variable Frequency Solar Pump Inverter is a high-tech system. It lets solar power directly run water pumps without needing batteries. MPPT solar pump

inverters change DC electricity from solar panels into AC, running different water pumps. They adjust to get the most power from your solar setup.

What is a solar on-grid inverter?

Solar on-grid inverters are also known as grid-tied inverters. This type of inverter feeds the electricity produced from the solar panels directly into the utility grid. Then, the water pumps draw their power from the grid.
