

Nauru subsidizes energy storage photovoltaics

Overview

Launched in 2019, the initiative includes the installation of a 6 MW gridconnected solar power plant and a 2.5 MWh battery energy storage system (BESS) to address the intermittency of solar power (Asian Development Bank, 2019).Will Nauru install a solar power plant?

Nauru has embarked on an ambitious project to install a grid-connected solar power plant with a capacity of 6 megawatts (MW) of alternating current. This initiative is part of the Solar Power Development Project, which aims to diversify the energy mix and reduce reliance on diesel.

Can solar photovoltaics be used as an energy source on Nauru?

While Nauru is currently 100% electrified by grid-distributed power, the government has considered and continues to explore the use of solar photovoltaics as an energy source. This interest was first indicated at the 1995 South Pacific Forum Meeting.

Why is there limited interest in solar applications on Nauru?

As all energy on Nauru is provided from predominantly fossil fuels (electricity generation), there has only been a limited interest shown in solar applications. Nauru being located nearly on the equator limits the need for hot water for domestic applications.

How does Nauru generate electricity?

Nauru currently relies heavily on imported diesel for power generation, which poses challenges due to fuel price fluctuations and supply interruptions. About 3% of its electricity comes from solar photovoltaic installations. What key renewable energy projects are underway in Nauru?

Does Nauru need government subsidies?

The high cost of power generation in Nauru, often exceeding \$0.40 per kilowatt-hour, has historically required government subsidies to keep electricity affordable for residents. However, recent efforts, including support from the Asian Development Bank (ADB), have aimed to improve the financial sustainability of the energy sector.

What are the renewable energy sources in Nauru?

The renewable energy sources in Nauru are solar radiation and a small amount of biomass. However, as the electricity is supplied from diesel generation and has been abundantly available over the past 80 years, these other renewable energy sources have not been extensively exploited.

Nauru subsidizes energy storage photovoltaics

Ways to store energy from solar panels Nauru

The grant will fund a 6-megawatt (MW) gridconnected solar power plant and a 2.5 MW-hour, 5 MW battery energy storage system (BESS) to help supply continuous power even when solar ...

Email Contact

Nauru datong solar power

China-Nauru cooperation in photovoltaic solar energy In the southwestern part of the island nation, rows of blue photovoltaic panels are neatly arranged close to the azure sea, reflecting ...
