

# Now making lithium battery packs

### **Overview**

How do you make custom lithium-ion battery packs?

Key Takeaway: Manufacturing custom lithium-ion battery packs requires precise engineering, quality control, and safety standards. The process involves gathering requirements, selecting cells, concurrent engineering, prototyping, certification, production planning, and lifecycle support.

What makes a custom lithium-ion battery pack unique?

The foundation of any custom lithium-ion battery pack lies in the selection of the integrated cells. Our cell selection for custom packs involves: Lithium-ion cell advancements continue expanding performance boundaries yearly. Leveraging state-of-the-art cell technology is crucial for maximizing custom pack capabilities.

Why do custom lithium-ion batteries need a lifecycle mindset?

Once produced, properly supporting packs throughout service life is paramount: This lifecycle mindset maximizes the ROI of custom lithium-ion battery investments. Working with lithium-ion cells and batteries necessitates rigorous safety protocols given flammability risks if improperly handled.

How to make a battery pack?

To make the battery pack, you have to first finalize the nominal voltage and capacity of the pack. Either it will be in terms of Volt, mAh/ Ah, or Wh. You have to connect the cells in parallel to reach the desired capacity (mAh) and connect such parallel group in series to achieve the nominal voltage (Volt).

What is the cell assembly process in lithium batteries?

The cell assembly process in lithium batteries involves arranging and connecting individual cells to form a complete battery pack. This includes cell sorting, mounting, resistance and laser welding, and integrating the Battery Management System (BMS).

How can lithium-ion cell technology improve a custom pack design?

Lithium-ion cell advancements continue expanding performance boundaries yearly. Leveraging state-of-the-art cell technology is crucial for maximizing custom pack capabilities. Concurrent electrical and mechanical engineering is needed to optimize the custom pack design within constraints.
