

Photovoltaic energy storage exports

Overview

Industry data reveals that exports of photovoltaic (PV) modules and lithium-based energy storage systems surged in Q1 2025, especially toward regions emphasizing energy independence and climate resilience. How did China achieve record photovoltaic export volume growth in 2023?

02 Jul 2024 by evwind. In 2023, China achieved record photovoltaic export volume growth across all subcomponents, driving manufacturing expansion in emerging markets.

How will China's Solar Exports affect energy security?

The growth in solar exports from China is helping to meet growing demand for clean, affordable power, driven by markets like Europe and South Africa that are aiming to increase energy security. Solar power is expected to be the largest source of electricity capacity by 2027 and will be key to rapidly reducing emissions across the power sector.

How has China shaped the global supply and demand of solar PV?

Government policies in China have shaped the global supply, demand and price of solar PV over the last decade. Chinese industrial policies focusing on solar PV as a strategic sector and on growing domestic demand have enabled economies of scale and supported continuous innovation throughout the supply chain.
