

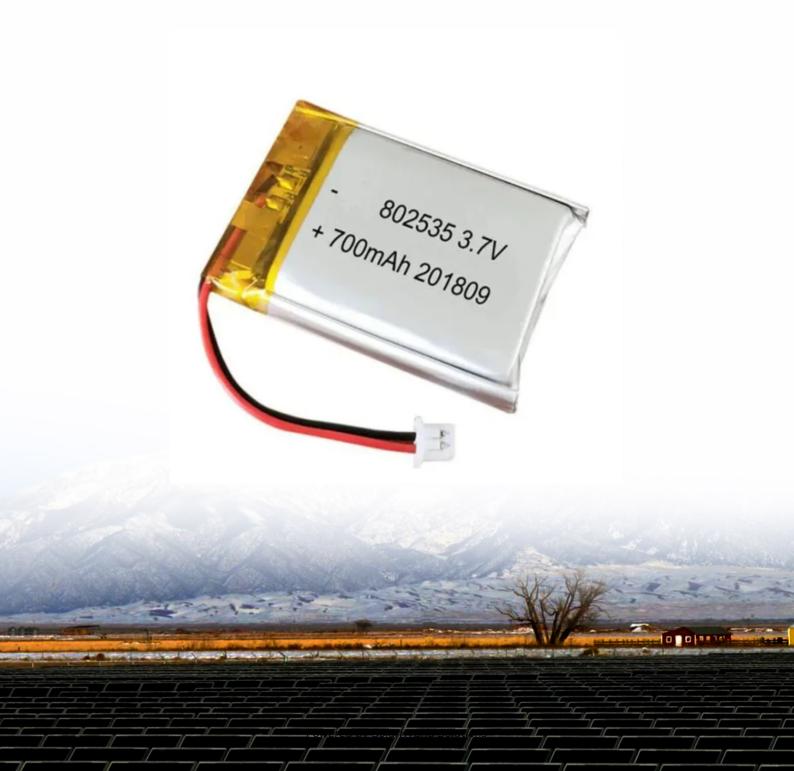

Photovoltaic panel battery installation

Overview

Surface Area: The surface area of the site at which the PV installation is intended should be known, to have an estimation of the size and number of panels required to generate the required power output for the load. This also helps to plan the installation of inverter, converts, and battery banks.

Site assessment, surveying & solar energy resource assessment: Since the output generated by the PV system varies significantly depending on the time and geographical location.

Suppose we have the following electrical load in watts where we need a 12V, 120W solar panel system design and installation. 1. An LED lamp of 40W for 12 Hours per day. 2. A refrigerator.
