

Photovoltaic solar panels in the fields

Overview

One approach to decarbonising agriculture involves integrating solar panels – or photovoltaics (PVs) – into fields of crops, greenhouses and livestock areas. Often known as agrivoltaics, this can help farmers reduce their carbon footprint while continuing to produce food.

Photovoltaic solar panels in the fields

Raising livestock and crops under solar panels , UMN Extension

Agrivoltaics refer to growing crops, building pollinator habitats or raising livestock underneath solar panels. It allows for renewable energy systems and agriculture to occur on the same ...
