

Portugal grid-connected photovoltaic inverter

Overview

Why are PV installations growing in Portugal?

PV installations in Portugal, namely grid connected systems had a continuous increase since 2007 firstly driven by FIT and by Independent Power Producers dynamics. Solar photovoltaic installed capacity has grown from very small numbers to 460 MW, registering the largest relative growth rate, comparing to other renewable energy sources.

What is a hybrid inverter?

A hybrid inverter can manage energy from multiple sources, such as solar panels, batteries, and the grid, allowing you to store excess energy for later use. Standard inverters, however, only convert solar power for immediate use and do not support battery storage.

Is the Portuguese electricity system unbundled?

The Portuguese Electricity System is nowadays totally unbundled, a process that started in 1995 inspired in the same principles of the European Directive 96/92/EC, December 19th that defines common rules towards the founding of the Internal Electricity Market.

Can a hybrid inverter work without a battery?

Yes, hybrid inverters can function without a battery. In this setup, they manage the direct flow of solar energy to your home or business and can send excess energy back to the grid. Adding a battery allows you to store unused energy for greater flexibility.

What is a three-phase hybrid smart inverter?

Three-Phase Hybrid Smart Inverter Efficiently manage energy with our Three-Phase Hybrid Inverter—seamlessly integrating solar and grid power for reliable, sustainable solutions in commercial and residential settings. HV Three-Phase Hybrid Smart Inverter.

What types of inverters are available?

Our range includes single-phase and three-phase hybrid inverters, suitable for residential, commercial, and even industrial applications, providing scalable and reliable energy management. What kind of maintenance does an Inverter need?
