

Price of energy storage system for power plants in Thailand

Overview

How many mw can a solar generator store in Thailand?

Their total combined storage capacity was 994 MW. Interestingly, this allowed generators to sign semi-firm power purchase agreements (PPAs) with the Electricity Generating Authority of Thailand (EGAT) with minimum availability guarantees. Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site.

Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

Does Thailand offer private sector participation in renewable electricity generation?

The Government of Thailand has opened access for private sector participation in the renewable electricity generation business through its programs for small and very small power producers.

Is solar the cheapest source of bulk electricity in Thailand?

Under the latest draft PDP2024, solar accounts for half of the 43 gigawatts (GW) of capacity additions planned for 2024-2037. The findings of BNEF's economic analysis aligns with the draft PDP2024's prioritizing of solar as utility-scale solar is already the cheapest source of bulk electricity generation in Thailand.

Who buys electricity in Thailand?

It is the principal purchaser of electricity in Thailand and sells all the power it generates or purchases (from private power producers and neighboring countries) to two state-owned enterprises: the Metropolitan Electricity

Authority (MEA) and the Provincial Electricity Authority (PEA).

How much does pumped hydro storage cost in Thailand?

According to BNEF analysis, the levelized cost of storage (LCOS) of Thailand's eight-hour pumped hydro projects ranges from \$61-176/MWh, lower than the global average (Figure 13). 0 61 Source: BloombergNEF. Note: The average LCOS for pumped hydro storage for selected countries is \$176 per MWh.
