

Russia s first batch of 5G communication base station inverters completed

Application scenarios of energy storage battery products

Overview

How did Skoltech develop the first Russian 4G/LTE base station?

The project leverages Skoltech's unique knowledge and expertise gained during the 5G base station development. It took six months for the team to build a functional prototype of the first Russian 4G/LTE base station. At Skoltech lab, the team made a VoLTE call and tested the station's mobile Internet access capability.

How many base stations does Russia need a year?

According to him, Russian operators annually need about 60-80 thousand new base stations. Demand will increase when the deployment of 5G networks begins in Russia, he does not exclude. Read more in the exclusive Izvestia article:

Who makes cellular base stations in Russia?

For example, Yadro has opened the first production line in Russia for electronic modules for cellular base stations, Izvestia was told by X Holding, which it belongs to. This is one of the key production elements required for a full-fledged large-scale production of base stations, which is scheduled for the end of this year.

How many irteya base stations will MTS connect in 2025?

During 2025, MTS will connect another 1,000 Irteya base stations. The equipment was developed and manufactured by Irteya LLC, a Russian telecom vendor, and 50% of the shares of this company belong to MTS PJSC. PJSC Mobile TeleSystems (MTS, TIN 7740000076), together with its subsidiaries, serves about 100 million cellular subscribers.

Does Russia have a cellular network?

The Russian industry has begun to actively develop the production of equipment and components for cellular communications. Until 2022, base

stations (BS), without which cellular networks cannot operate, were supplied to Russia by Nokia, Ericsson and Huawei. Since then, domestic companies have been actively engaged in import substitution.
