

Saint Lucia Wind and Solar Energy Storage Power Station

Overview

Construction work will include the development of 10 MW of solar power along with an energy storage system with two-hour lithium-ion batteries with a capacity of approximately 13 MW / 26 MWh, as well as connection to LUCELEC's 66 kV transmission grid. What is the best energy source for Saint Lucia?

The NETS findings indicate that a portfolio of utility-owned solar, distributed solar, wind, and diesel together with energy storage offers the best economics for Saint Lucia.

How does electricity work in Saint Lucia?

The island's 180,000 residents and tourism-driven economy depend heavily on reliable electricity service. Today, that electricity is generated almost exclusively from imported diesel fuel, leaving Saint Lucia vulnerable to a costly and volatile energy source.

Where is St Lucia's first solar PV plant located?

On the 11 th April 2018, the St. Lucia Electricity Services Limited (LUCELEC) – the sole electric utility company on the island – completed the commissioning of the island's first utility-scale solar PV plant. The plant is rated at 3 megawatt (MW) and is located in La Tourney, Vieux Fort, just north of the Hewanorra International Airport.

Will LUCELEC install a battery storage system in Vieux Fort?

Looking ahead, LUCELEC is working on plans to install a 7.5 MW/3 MWh utility-scale battery storage system in Vieux Fort to support the existing PV plant as well as to install another 10 MW solar PV plant with battery storage on the east coast of the island. Loading. Power Systems & Renewable Expert, Founder of XenogyRE.

Is Saint Lucia a model for other small island developing states?

Saint Lucia's leadership in pursuing the NETS and the subsequent 3 MW solar farm solidify the island nation's position as a leader in the region and a model for other small island developing states that face similar challenges and opportunities in pursuing a sustainable energy transition.

Why is Saint Lucia a good place to live?

At the same time, the island boasts strong renewable resource potential, including solar, wind, and geothermal. Developing these resources in a manner that preserves the natural environment, supports local employment, and ensures a reliable and cost-effective electricity system represents a challenge and an opportunity for leaders in Saint Lucia.
