

# Sierra Leone installs photovoltaic power generation for telecommunication base stations

#### **Overview**

Baoma Solar Power Station, is a 25 megawatts (34,000 hp) power plant under construction in . The first phase of this renewable energy infrastructure with generation capacity of 5 MW is operational and was commercially commissioned in December 2022. The second phase with generation capacity of 20 MW is under construction and is expected to come online in the Q4 of 2023. It is reported to be the first grid-connected solar farm in the country, built under a publi.

In a move that blends clean energy with cutting-edge technology, Sierra Leone has launched Africa's first solar-powered 5G network. Why does Sierra Leone need infrastructure investment?

The Government of Sierra Leone is also seeking infrastructure investment to support expansion of energy distribution and transmission networks. Sierra Leone has good access to natural resources necessary for energy production such as access to viable wind speeds and sunshine for renewable wind and solar projects.

What investment opportunities does Sierra Leone offer?

Sierra Leone offers investment opportunities in several segments of the energy industry including wind energy, solar energy, hydro, and bioenergy. The Government of Sierra Leone is also seeking infrastructure investment to support expansion of energy distribution and transmission networks.

Why is solar power so expensive in Sierra Leone?

It is delivered at a very high cost with Sierra Leone having one of the highest electricity tariffs in the sub-region. There are numerous waterfalls for hydropower and abundant sunlight for solar power generation with an estimated hydro project potential of more than 1000MW, while solar opportunities are above 240 MW.

Does Power Africa support Sierra Leone?

Power Africa supported Sierra Leone in 2015 with a \$44.4 million four-year threshold program through the United States Millennium Challenge

Why is Sierra Leone a good country?

Sierra Leone has good access to natural resources necessary for energy production such as access to viable wind speeds and sunshine for renewable wind and solar projects. The country is also well positioned to support hydroelectric power with high rainfall levels at 2500mm/year.
