

# Solar Cell System Selection and Design

#### **Overview**

This article explains how to design solar power systems with a focus on calculating energy requirements and sizing solar panels, batteries, inverters, and charger controllers.

A complete solar power system is made of solar panels, power inverters-specifically DC to AC-charger controllers, and backup batteries.

The following will help you select and size solar system components. 1. Step 1: Calculate the electrical load powered by the solar system 2. Step 2: Select the solar panel 3. Step 3:.
