

Spanish power grid energy storage solution

Overview

What is Spain's energy storage subsidy plan?

EU approved Spain's €700 million energy storage subsidy plan, enabling Spain to deploy large-scale battery storage with co-financing up to 85%.

Why does Spain need a stronger energy grid?

A stronger grid helps homes, businesses, and industries. It gives steady electricity and cuts down on interruptions. In 2023, renewable energy sources made up nearly one-quarter of Spain's final energy consumption, as seen below.

What is Spain's regulatory framework for energy storage?

Spain's regulatory framework for BESS is set in its Strategy for Energy Storage. The Strategy identifies the required regulatory measures – such as grid access, market structure, and addressing double tolling – that are currently needed to ensure the deployment of a solid energy storage market.

Does Spain have a good grid?

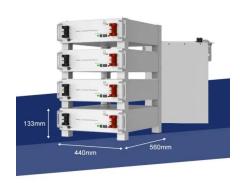

"If you have strong grids and a bit of spare capacity in power lines and substations, it becomes easier to deal with issues that come from generation." But Spain has the lowest ratio of grid to clean power investment in Europe, the news story stated, at just 30¢ per dollar, compared to an average of 70¢ across most of the continent.

How does Iberdrola support energy storage?

In terms of energy storage, Iberdrola sees it as a key driver of decarbonisation and the energy transition, enabling large-scale and small-scale storage through pumped storage and lithium-ion battery technology to support the electrification of the energy system.

Spanish power grid energy storage solution

Research Suggests That Deploying 15GW Longduration Energy Storage

Research shows that renewable energy generation in Spain may face reductions of more than 5% from 2025 to 2030, while the deployment of long-duration energy storage ...
