

# The difference between lithium batteries and battery packs

# **Overview**

What is the difference between battery module and battery pack?

The primary distinction between a battery module and a battery pack lies in their scale and functionality. A battery module is a smaller unit that contains a group of interconnected cells, often with its own BMS. It is a component within a larger battery pack, which consists of multiple modules arranged in a specific configuration.

What is the structure of a lithium battery?

The general structure of lithium batteries is a cell, battery module and battery pack. Battery cell technology is the cornerstone of battery systems. The process of assembling lithium battery cells into groups is called PACK, which can be a single battery or a battery module connected in series and parallel.

What is a lithium-ion battery pack?

A lithium-ion battery pack is the largest and most complex assembly in the hierarchy of battery systems. It consists of multiple modules arranged in a specific configuration to meet the voltage and energy requirements of a particular application.

Why is the voltage of a lithium ion battery important?

The voltage of a lithium-ion cell is a crucial parameter as it influences the overall voltage of a battery pack when multiple cells are connected in series. When multiple cells are connected in series within a battery pack, the total voltage of the pack is the sum of the individual cell voltages. What is a Lithiumion Battery Module?

.

How does a lithium ion battery work?

In the case of lithium-ion cells, lithium ions move between the positive

(cathode) and negative (anode) electrodes during charge and discharge cycles. Different combinations of materials result in batteries with varying energy density, voltage, cycle life, and safety features. The voltage of a lithium-ion battery cell is typically around 3.7 volts.

What are battery cells & modules & packs?

Battery cells, modules, and packs are different stages in battery applications. In the battery pack, to safely and effectively manage hundreds of single battery cells, the cells are not randomly placed in the power battery shell but orderly according to modules and packages. The smallest unit is the battery cell. A group of cells can form a module.
