Overview

Why is battery energy storage important for PV industry?

It will serve as input to PV industry certification and compliance approaches and practices. Combining PV with storage brings additional financial considerations. Battery energy storage can resolve technical barriers to grid integration of PV and increase total penetration and market for PV.

Why should you track energy availability in a PV operation contract?

Tracking this availability (or unavailability) provides transparency into the equipment reliability state to all parties involved in an O&M services contract. In most PV operation contracts, energy will be the driving factor of whether the system is operating as expected.

Why is combining solar and storage a good idea?

Monetizing and combining all the different value propositions of combining solar and storage is an ongoing area of research and business model innovation, and will increase the market for PV and the need for financing. The more interactive nature of battery dispatch (charge/discharge) increases the "operations" part of O&M considerably.

Are PV storage systems safe?

Storage systems in PV plus storage settings call for many overlapping safety standards and precautions, particularly those that apply to working on DC wiring, and bring a set of technology-specific new considerations.

Why is energy availability important in assessing PV systems?

Both energy and availability are necessary metrics for assessing PV systems. If the stakeholders involved in a contract are most interested in energy production, and if the contract holds parties responsible for energy production, then it is crucial that energy losses associated with unavailability and system performance are accounted for.

What should NREL consider when testing energy storage systems?

Photo by Owen Roberts, NREL Considerations for energy storage system testing include the following. If cost-justified by a large purchase, consider qualification testing of battery systems. Include test conditions in specifications for battery O&M diagnostics and testing.
