

# The role of Argentina s mobile power storage vehicle

#### **Overview**

Why is Argentina a good stance on energy storage?

In Argentina, the stance provides a good lesson to the European stakeholders, especially in the commercial and industrial segments of energy storage. Emerging markets can present both local and foreign players by developing tenders that are investment appropriate and clear technically and financially secured.

Does Argentina have a strategy for the Electromobility sector?

On the one hand, Argentina has so far not defined a clear strategy for the electromobility sector. There are several plans developed by different ministries that define lines of action and goals for the sector. However, a comprehensive and focused policy on the productive transition towards electric vehicles has not yet been established;

How can Argentina achieve profitability in the manufacture of cells & batteries?

Achieving profitability in the manufacture of cells and batteries requires scale and cutting-edge technology. Argentina is a late entrant to an advanced technological race that requires significant R&D efforts, especially in the highly competitive electromobility segment. Public companies can play a key role.

Is Argentina a good country for automotive industry?

Argentina is in the group of countries that have a traditional automotive industry with some degree of export orientation, are highly dependent on multinational terminals and are less able to make a technological transition.

What factors determine the success of lithium-ion battery production in Argentina?

Lithium is a key input for the production of lithium-ion battery cells and

Argentina has 10.4% of the world's total reserves. However, the factors that determine the success of battery production go beyond the presence of the input. Achieving profitability in the manufacture of cells and batteries requires scale and cutting-edge technology.

Does Argentina have economic incentives for EVs?

Economic incentives for both the supply and demand of EVs are a frequently used policy instrument for the promotion of niche markets and the early commercial adoption of EVs. So far, Argentina does not have such incentives either;
